Hello Hiring Team,

I am excited to apply for an entry-level Software Developer position. I am currently completing the Computer Programming and Analysis program at George Brown Polytechnic in Toronto, where I have developed a strong foundation in full-stack development, object-oriented programming, databases, and modern web technologies.

Through academic projects and hands-on development work, I have built web, mobile, and desktop applications from end to end. My experience includes designing database schemas, developing RESTful APIs, and building responsive user interfaces using technologies such as JavaScript, React, Node.js, Java, C#, SQL, and Python. I also have experience working with real-time systems and client-server architecture, and I focus on writing clean, maintainable, and scalable code.

In addition to my coursework, I contribute to software development initiatives at George Brown College as a Student Ambassador and Junior Software Developer. In this role, I help develop and deploy internal applications supporting institutional operations and academic events. These projects have strengthened my ability to collaborate in team environments, participate in code reviews, and design practical systems used in real-world settings.

I am motivated, detail-oriented, and eager to continue growing as a developer while contributing meaningful work to a professional team. I am particularly interested in environments that encourage innovation, collaboration, and continuous learning.

Thank you for your time and consideration. I look forward to the opportunity to contribute my skills and enthusiasm to your team.

Sincerely,

Melisa Paksoy
